## **eANV: Modawi software supporting Daimler**

**Yesterday, Daimler AG started use of the electronic records procedure at its plant in Bremen. They use the Modawi eANV solution by Consist ITU.**

Hamburg – "We have already sent the first electronic consignment notes for three different types of waste at the Bremen plant. The pilot worked flawlessly, including the electronic signatures," says Ralf Bettac, responsible IT project lead at Daimler AG. In its plans to comply with the new legal requirements for the electronic waste records procedure starting April 1, 2010, the company has decided to integrate the Modawi eANV solution by the Hamburg company Consist ITU into its own waste management software provided by TRIAS.

Modawi can easily be implemented in the Trias AM waste management system, making it possible to implement eANV data traffic uniformly in all German Länder, since Modawi communicates directly through the ZKS. Consist ITU supported Daimler AG in all their questions about digital signatures and legal requirements, as well as in implementing the data exchanges with authorities and the ZKS.

### **Comprehensive introduction in all German plants**

After the Bremen plant is complete, the plants in Berlin, Hamburg, and Würth will follow, before the electronic records procedure is rolled out by April 1, 2010 in all 18 locations of Daimler AG who must dispose of hazardous waste. These pilot locations were selected with care, since they

represent different business and production areas (production of passenger cars, trucks, motors, components), with entirely different production processes, different waste disposal partners, and located in different federal states.

## **Hazardous waste and its disposal at Daimler AG**

Hazardous waste is produced during the manufacture of vehicles, such as used oil, paint sludge, and cooling lubricants, until now requiring about 7,500 consignment notes for proper disposal. The conversion of the waste records procedure from paper to the digital world will affect 18 German locations and 120 employees.

Before the pilot start in Bremen, many milestones had to be met in the project to convert to the electronic waste records procedure. General IT prerequisites had to be clarified, and the various installations of TRIAS unified. Signature authorizations had to be obtained for the digital signatures to be used, and suitable signature cards and card readers had to be tested, selected, and procured. Daimler AG now has 100 card readers and 120 signature cards available for eANV use. The timely start of the eANV project in November 2008 and the close cooperation between project management and the various local coordinators at Daimler AG contributed to the successful start of pilot operation.

## About Consist ITU Environmental Software GmbH

Consist ITU is the specialist for IT solutions concerning waste management for government authorities and companies throughout Europe.

Our core competencies are IT concepts as well as the development and maintenance of IT solutions. For more than 15 years we have successfully implemented projects for numerous government authorities and private companies, both national and international.

Our experts have excellent engineering knowledge. Our strengths are specialized consulting, both in procedural questions and those concerning IT, and the development of custom-tailored IT solutions for your waste disposal processes.

### Mission

We guide our customers to success using competent consulting true to our motto of "Specifications from Specialists". This serves as the basis for software development efforts with results that meet precisely your requirements.

### Range of services

Our range of services includes solutions

- For conversion to the paperless Electronic Records Procedure (eANV),
- For integrating qualified electronic signatures, and including
- Waste monitoring and waste management systems throughout the EU.

In addition, we provide

- IT concepts such as for managing hazardous waste,
- Process support, or
- Consulting on the EUDIN interface.

## History

ITU was founded in August 1995 from the IT department of the ITU-Ingenieurgesellschaft technischer Umweltschutz GmbH. In December 2004 ITU became a member of the Consist World Group. Since 2008 ITU is named Consist ITU Environmental Software GmbH.
